

Integrated Systems

Enerfin Integrated Systems are designed and manufactured to meet custom specific requirement. The systems vary from electrical to mechanical assemblies for power process and industrial applications.

INTEGRATED SYSTEMS :

Enerfin can provide engineering, fabrication, and procurement services on turn-key basis. Packages include heat exchangers, pumps, strainers, piping, valves, instrumentation and control panels providing a consistent single source responsibility.

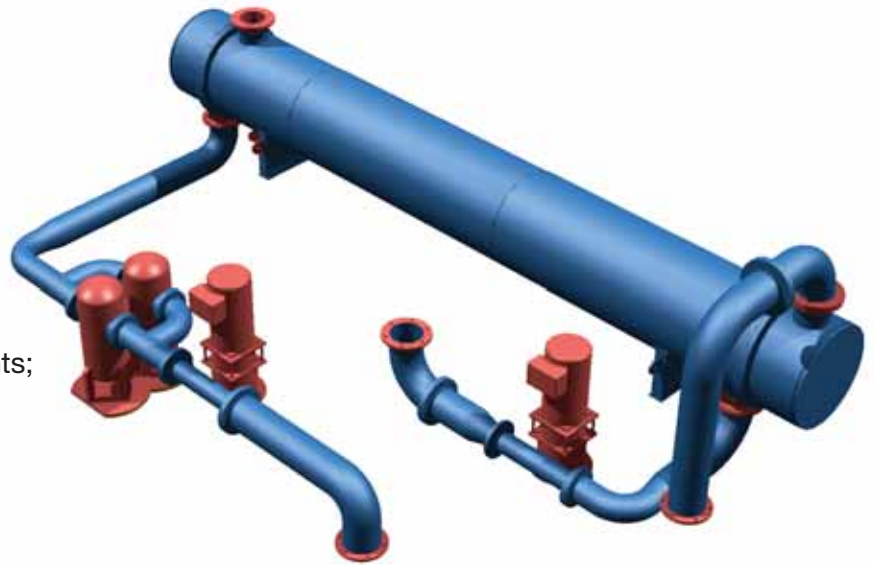

Enerfin Integrated Systems can be skid mounted and tested, or delivered loose with necessary parts identification for site erection.

Electrical assemblies vary from a programmed control panels to AC and DC current distribution panel.

We offer full electrical and mechanical engineering services to verify and satisfy your needs.

Applications

- Open and closed loop cooling circuits in power plants; Hydraulic systems;
- HVAC for power plants;
- Process installations.
